

Database Administration Services

Enhance Database Productivity and Performance

CANBERRA's Database Administration Services provide the peace of mind that your database system is always running, backed-up, and sustained for optimal performance. Our services also include customized data monitoring and automatic data updates to eliminate manual input and optimize productivity.

SERVICES INCLUDE:

- > CANBERRA-provided administrator to check and maintain databases used for laboratory computer software products (Supports Oracle and SQL-server databases, other third-party software not provided by CANBERRA is not included). This includes:
 - system backups
 - restoration of database (if required)
 - performance tuning
 - installation of database software upgrades
 - installation for new users
- > Ongoing monitoring via remote access
- > Semi-annual or bi-annual two-day site visits
- > Microsoft and security update support and planning

Customized monitoring of data through creation of automatic updates in EXCEL
Examples are:

- > Excel graphs (interfaced to the APEX database) to provide:
 - daily trends of different radioactive nuclides that may indicate fuel failure
 - changes in nuclide concentration over time
 - automatic updates of data for any number of spreadsheets for site calculations to eliminate manual input of the data
 - automatic corrections to the spreadsheet with data updates
